

BIRD MITES

What we do

- Dust out the ceiling space using 3 – 4 times the normal amount of powder.
- Remove any nest sites.
- Mist walls and carpets in rooms with bad problems. This is only for extremely bad problems as the room has to remain isolated for one day. No one can enter the room during this time.

What you should do before a treatment

- Wash all bedding in hot water.
- Wash any clothes that could be contaminated by the lice in hot water.
