Termiticide

## Safeguard your home and family with a comprehensive termite treatment from Sandgate Pest Control, the termite specialists.

SANDGATE PEST CONTROL

*the termite specialists*

### WHY USE ALTRISSET?

You're probably thinking to yourself, "Why are termites attacking my property." Unfortunately you are not alone, termites target thousands of homes every year. Termites can be prolific in SE QLD depending on the season, causing extensive damage to homes and properties. In most cases this damage is not covered by home insurance policies. Although termites are a big problem for you and your family, you can control them now and well into the future by using an innovative termiticide such as ALTRISSET, applied by termite management professionals such as SANDGATE PEST CONTROL, the termite specialists.

A thorough termite treatment and the installation of a protection zone around your property is the only way to protect your property from termites, now and for years ahead. ALTRISSET is the most innovative termite control product to come onto the market in the last 10 years with unique benefits over older termite control products. Importantly ALTRISSET **will stop termites feeding on within hours** and then protect your home against further damage for years to come.

### WHAT IS ALTRISSET?

ALTRISSET is the result of over 10 years of scientific research and is the first termiticide featuring the active ingredient chlorantraniliprole, an active ingredient from the anthranilic diamide class of chemistry. This class of chemistry was inspired by research into the chemical properties of a natural substance found in the bark of trees and shrubs of the genus *Ryania*.

ALTRISSET is exempt from poison scheduling by the Australian regulatory authorities. It is deadly to termite colonies, but has very low mammalian toxicity.

ALTRISSET is an innovative product with new generation termite control technology that stops termites feeding within hours, protects your property for years against further infestation and is exempt from poison scheduling, no other termiticide can offer you all these benefits.

# HOW ALTRISSET WORKS

SANDGATE PEST CONTROL

the termite specialists

## The ALTRISSET termite control timeline

The diagram illustrates a termite worker that has tunnelled through sand treated with ALTRISSET. The glowing areas represent the high concentration of ALTRISSET around the mandibles (mouth parts) which causes the stop feeding effects within hours.

## LOW TOXICITY

Unlike most termite products that are made from chemicals which can be hazardous to people and the environment, ALTRISSET has a mode of action that is harmful to termites and not to humans. In fact, ALTRISSET is the only liquid termiticide that is exempt from poison scheduling by the Australian regulatory authorities which means your Sandgate pest manager doesn't have to wear protective gear when mixing and applying the product.

ALTRISSET has very low toxicity to pets, birds, fish, earthworms and even honey bees, which means you can protect your home with minimal impact on the environment.

## ALTRISSET FACTS

- Stops termites feeding within hours
- Eliminated termites from structures in 3 months
- Outstanding transfer properties for superior population control
- Provides continuous protection for years
- Favourable safety and environmental profile
- Exempt from poison scheduling
- Very low toxicity to non-target species
